

Creation of new innovative Mobile applications for ios & android devices for radio stations.

Brief project description: The new product concerns a radically renewed version of an existing product based on innovative technologies. In this sense, 3DS, with many years of experience in the industry, and the already existing offer (in an older version) of the product, can determine with absolute clarity the target market of this new product. Thus, the new product is addressed to all radio stations (FM & AM), as well as all Web Radios worldwide, with emphasis on the American and European markets, incorporating new functions and tools.

Investment plan budget: €260,000.00
